Editorial

THE ELECTROCHEMICAL SOCIETY OF INDIA

IN accordance with the long cherished desire of electrochemists, technologists, engineers and industries, the Electrochemical Society of India (ECS of India) has been formed in March of this year. Quite a long period of time has passed since a Section of the Electrochemical Society, New York (ECS) was organized in India. Indeed the India Section was the first section to be formed outside the U.S.A. On looking back through the years we are happy to find that this section has been of immense help in building up and providing the necessary background for the starting of an Indian Society in the electrochemical field.

The India Section of the ECS will cease to exist with effect from January 1964. The existing goodwill as well as the standing of the Bulletin will no doubt go a long way in establishing the ECS of India and its Journal on a sound basis. The new Society will have different professional groups such as batteries, corrosion, electrodeposition, theoretical electrochemistry and electrometallurgy to cater to the interests of members in the academic and industrial spheres. It is also proposed to open branches of the Society in important centres.

The ECS of India, of course, intends to maintain friendly relationship with the ECS at a mutually acceptable level. The India Section of the ECS welcomes the formation of the ECS of India and hopes that it will grow in strength within the next few years.
